Annotations

2 What was acted on experiment_run row · id 3f9a...c21 — the record this action targeted.

- 3 **Forensic context** `audit_log.ip_address` (type `inet`) and `audit_log.session_id`. Both are null for a system-internal action, which is why such a row reads “system” rather than showing blanks. The session identifier correlates a sequence of actions back to one sign-in, so a suspicious change can be read alongside whatever else the same person did around it.

- 4 Confirms no enrollee was placed in more than one group.

- 5 **Verbatim payload** The raw detail JSON (`jsonb`) stored with the entry — exactly what the action recorded.

- 6 Close this dialog.
