

 Confirm · delete cohort / doc

confirm-delete.html · 760×440

 **Annotations**

- 1 **Context: delete a reusable item** The confirm shown when deleting a **cohort** or a **document** — a single reusable definition, not a whole run or database. An item still referenced by a **live run** is blocked, so a running condition can never lose data underneath it. You can't delete an item that a **live run** is still using, so a running experiment never loses the data it depends on.
- 2 Cancel without deleting.
- 3 Permanently delete this item.
