Data & Backups · reset / reseed the data tables

4 **Test / demo environment.** Reset and reseed are a convenience for trying out the app. Production deploys hide this screen entirely.

23 Data tables 48,050 Rows (live) 61 MB Data size Jul 20 Last reseed

5 **Danger Zone — Reset the Database**

6 **Wipe the data tables**

7 **Reset to empty**
Clears every data table — a fresh install with no rows.

9 **Reset + demo data**
Clears, then reloads the shipped demo dataset (9,840 rows).

8 **Reset to empty**

10 **Reseed from demo**

11 **What Reset / Reseed Does**

- **Reset to empty** — clears every data table; a fresh install with no rows.
- **Reseed from demo** — clears, then reloads the shipped demo dataset (9,840 rows).
- Each takes an **internal safety snapshot** first and writes an `audit_log` entry.
- Enrollees are briefly locked out (~20 s) while the operation runs.
- **Not touched:** schema, .env config, and auth accounts.

Annotations

- 1 Version pill (right-aligned)** Dimmed build pill sits on the RIGHT, beside the account menu. Hover reveals the build sha; on phones it folds into the account menu.
- 2 Account menu** Avatar + name + chevron open the account menu (profile, settings, sign out). On narrow screens the feedback / bug / dark-mode icons and version pill collapse into here.
- 3 Data tables only** Reset / reseed act on the **data tables** only. Schema, install config (.env) and auth accounts are **not** touched.
- 4 Test / demo only** This surface is a **test-environment convenience** — production deploys hide it entirely.
- 5 Auto safety snapshot** Reset and reseed each take an **automatic internal safety snapshot first** (a middle-tier seed-SQL dump), and each is logged to `audit_log`. There is deliberately **no user-facing savepoint console or rollback UI** — reset / reseed is the whole surface.
- 6 Empty vs demo** The only difference between the two is whether the pristine demo seed is reloaded after the wipe. Empties every data table, then you pick what to put back. An internal safety copy is saved first.
- 7** Leaves every table empty — a clean start for a brand-new setup. No rows.
- 8** Wipe the database to an empty state.

- 9 Reloads the demo data (9,840 rows) — the sample data for trying out the app.
 - 10 Reload the database with demo data.
-
