2 Scope

This session All my sessions **3** This run

"This run" appears for an experimenter opening this from a run; an enrollee sees only their own.

Include timestamps ☒

4 Include model & latency ☐

Annotations

- 1 Transcript & data export** Downloads the conversation transcript; the same dialog backs the experimenter data export.
- 2 Scope depends on who is asking** An enrollee sees the first two: their own session, or all of their own. An experimenter opening the same dialog from a run also gets **This run**, which takes every enrollee's transcript in that run — the shape ALGORITHMS §13 defines for the archive, minus the delete. An enrollee never sees another enrollee's transcript, whichever scope is chosen.
- 3** Experimenter only — every enrollee's transcript in this run.
- 4 Role-gated field** Model & latency columns are included in the experimenter export only — enrollees don't get them. Latency is how long each reply took to come back.
- 5** Discard changes and close.
- 6** Download the file to your device.
