 Annotations

- 1

Editing an existing experimenter Opened from the details eye, the edit pencil, or the row name — the editor shows the **actual staff user** (their username in the title), not an invite or blank “New” form.
- 2

The name shown across experiments, runs, and the roster.
- 3

Sign-in identity A staff user is EMAIL-anchored — this address is how they sign in and receive invites. Changing it re-points the identity; owned experiments and runs stay attached. The address this experimenter signs in with and receives invites at.

- 4 **Nested roles** Roles nest: **admin** ▶ **experimenter**. Admins do everything; experimenters author & run studies and see their peers. Stored as `role`. Set what this person can do. Experimenter authors and runs studies; admin also manages people, the activity log, and the database.
- 5 **status — a lifecycle enum** INVITED = email sent, not yet accepted · ACTIVE = accepted, can author & run studies · DISABLED = sign-in blocked but owned experiments & runs are kept for history. Set the lifecycle status. Disabled blocks sign-in but keeps everything this person owns.
- 6 **Read-only here** Experiments and runs are managed on their own screens, not from the user editor — this is a reference list of what this person owns. Disabling the account does not delete them.
- 7 **Concurrent-edit safety (OCC)** Save issues a **versioned write** — `UPDATE app_user SET ..., version = version + 1 WHERE id = ... AND version = (loaded value)`. If someone saved first, the save is refused with “This record changed since you opened it — reload”.
- 8 Discard changes and close.
- 9 Save edits to this experimenter's account.
