Full question: “which runs cost more than \$5 in the Terse-prompt study ?”

2

Button label

Runs over budget

3

Reuse these values?

\$5

Cost threshold

→ Becomes fill-in min_cost, asked each reuse

Parameter

Fixed

Terse-prompt study

Experiment

Locked in — this button is always about this study

Parameter

Fixed

4

Notes

Threshold is in USD; the cost column already includes the judge.

Approval notes are added here as well, stamped with who wrote them and when.

Still a draft — private to its owner until an admin approves it for the team.

5

Versioned save — safe against concurrent edits.

 Annotations

- 1

Editing an existing saved question Opened from the edit pencil or the row identity — the editor shows the **actual saved question** (its label in the title), not a “save a new question” form.
- 2

Label vs. full text label — the short button caption; the full question is stored as the tooltip (canonical_prompt). Short caption shown on the saved button; the full question is kept as its tooltip.

- 3 Mark a value **Parameter** to turn it into a fill-in-the-blank asked each time you reuse this (list values become a drop-down). Mark it **Fixed** to lock it in. One saved button then works for every value.

- 4 **Notes travel with the question** `nl_query.notes` — free text, editable by whoever may edit the row (the owner of a draft; an admin for anything). When an admin approves with a note, it is appended here, stamped with who and when, and the same text goes into the `audit_log` row. Findable by keyword search; not part of matching. Anything worth knowing about this question — units, caveats, why it was approved. Approval notes land here too.

- 5 **Concurrent-edit safety (OCC)** Save issues a **versioned write** — `UPDATE nl_query SET ..., version = version + 1 WHERE id = ... AND version = (loaded value)`. If someone saved first, the save is refused with “This record changed since you opened it — reload”.
