

New nudge

new-nudge.html · 760x574

1 New nudge [X]

2 Name

concise

3 Steering text

Try to keep your replies short and to the point — a sentence or two is plenty.

4 Notes — optional, internal

What this nudge is for and when to use it

5  Once a run references this nudge, its name and text are locked so results stay comparable — **clone it** to make a changed version.

6 Cancel **7** ✓ Save nudge

Annotations

- 1 New nudge** A nudge is a reusable, named steering message a study varies across runs. It's enrollee-safe — coaching shown to the person, never injected into the model prompt.
- 2 Short unique label** Stored as name — a handle like concise or think-aloud. Unique per experiment. A short unique label you'll pick from when you build a run.
- 3 Steering text** The message shown to the enrollee — the reusable copy this nudge carries. Keep it enrollee-facing coaching, not model instructions. The exact message the enrollee sees during a run.
- 4 Internal notes** Optional context for your team — why this nudge exists, when to use it. Stored as notes and never surfaced to enrollees. Internal only — never shown to enrollees.
- 5 Locked after first use** Once any run references this nudge, its name and steering text freeze so past results stay reproducible. To change the wording, clone it into a new nudge.
