5 Attachment — optional

 Choose file No file chosen

6  We attach recent activity — route history, console errors, app version — to help debugging.

7 Cancel **8**  Submit bug report

Annotations

- 1 Report a bug** The generic issue-tracker submit surface, launched from the bug icon in the app header. Files a BUG issue for admin triage.
- 2** Describe what happened and what you expected instead.
- 3 Severity** Stored as severity — one of low / med / high. Defaults to Med; admin can re-rank it during triage. How badly this blocks you. Medium is the default.
- 4 Captured for you** A picture of the screen you were on is grabbed automatically the moment you open this dialog and attached to the report — no upload step.
- 5** Add a log file, recording, or extra screenshot if it helps.

- 6 **Auto-attached telemetry** Recent app state rides along with the report so an admin can reproduce the issue: the pages you visited, any console errors, and the app version. No form fields for you to fill.
- 7 Discard changes and close.
- 8 Submit this bug report.
