⇌ Transfer to priya.n

 Annotations

- 1

Admin-only capability Only the admin (install owner) can reassign owner_id. An experimenter cannot hand their own work to a peer or push it up to the admin — the higher-up moves ownership. Recorded in the audit trail as action=transfer.
- 2

One control, many item types The same dialog serves any ownable definition — **experiment · cohort · model config · context document · saved query**. The item shown here is an example.
- 3

The live-run gate Blocked while the CURRENT owner has any experiment that is running or paused — you can't pull ownership out from under a live study. mira.l has none, so the transfer is allowed.
- 4

Reassign to another experimenter, or take it yourself. The current owner isn't listed.
- 5

Cancel without transferring.

- 6 Reassign ownership to this user.
