Annotations

- Version pill (right-aligned)** Dimmed build pill sits on the RIGHT, beside the account menu. Hover reveals the build sha; on phones it folds into the account menu.
- Account menu** Avatar + name + chevron open the account menu (profile, settings, sign out). On narrow screens the feedback / bug / dark-mode icons and version pill collapse into here.
- Nested roles** Roles nest: **admin** ▶ **experimenter** ▶ **enrollee**. Admins do everything; experimenters author & run and see peers; enrollees see only their own assignments.
- Invite a new user by email.
- Owner can't be demoted** The install owner (the only admin) can't be demoted — this prevents lockout.
- Full access — people, the activity log, search setup, and the database.
- Create and run experiments, see other experimenters, and add shared groups of enrollees.
- Concurrent-edit safety (OCC)** Two admins can open the same person at once. Save issues a **versioned write** — UPDATE profile SET ..., version = version + 1 WHERE id = ... AND version = (the value this row loaded); if the other admin saved first, this one is refused with **"This record changed since you opened it — reload"** — neither silently overwrites the other.
